4.16 Use of Credit Recovery in High Schools, 2008-2009 Through 2013-2014 ..... 44

## Introduction and Highlights

In 2009, the state law granting the Mayor control of the New York City public school system was renewed. That renewal included a requirement that the New York City Independent Budget Office "enhance official and public understanding" of educational matters of the school system. The law also requires the Chancellor of the school system to provide IBO with the data that we deem necessary to conduct our analyses. That data began to flow to IBO at the beginning of the 2010-2011 school year.

This report is our fourth annual summary of that data. (One report covered two years of data.) This report is designed as a descriptive overview of the school system rather than as an in-depth look at particular issues. It is organized into three main sections. The first presents demographic information on the students who attend New York City's public schools. The next section describes the resources-budgets, school staff, and buildings-that the school system utilizes. The final section describes the measurable outcomes of the school system's efforts for particular subgroups of students.

While this report presents a great deal of information, it is not exhaustive. Some important questions cannot be answered in this type of purely descriptive format. IBO will address those issues in more detailed and analytically sophisticated reports. While the citywide budget information presented in section three includes funding for students in public charter schools and publicly financed private special education programs, all data on school staff refers solely to schools operated by the Department of Education (DOE). With only one exception, noted below, all student data is also limited to DOE schools and does not include students in public charter schools or publicly financed special education programs.

Though this version adds no new indicators to those presented previously, a number of tables use a new measure of the relative poverty level of individual schools. In this report, IBO is introducing a measure that is meant to reflect the income of a typical household in a particular geographic community. It is important to stress that this is not a measure of the income level of individual families, like the free or reducedprice eligibility measure, but rather a measure of income in the community in which students live. The development of this school community poverty level relies of data from the U.S. Census, which we link to student address data provided to IBO by the DOE. Our methods are fully described in a separate technical report.

Among the highlights of this report:

- Seventeen percent of the DOE's students in school year 2013-2014 were born outside of the U.S. Spanish was the primary home language of 24 percent of students in 2013-2104. Hispanics constituted over 40 percent of the student body and there were more Asian students than white students in the system.
- In school year 2013-2014, nineteen percent of students were classified as having special needs.
- By eighth grade, 18 percent of students were overage for their grade. Almost a third of the students who began Kindergarten in 2003 had left the system by 2010, when they should have been in grade 8.
- Close to 28,000 students were reported to be living in shelters, an additional 48,000 were reported to be in doubled-up housing situations during school year 2013-2014.
- After accounting for inflation and payments to charter and nonpublic schools, DOE spending per-
pupil stood at $\$ 23,877$ in 2014-2015, $\$ 1,838$ or 8 percent higher than in 2009-2010.
- Forty-one percent of teaches left the DOE within five years of beginning their service in 2008-2009. Though high, this rate remains lower than it had been in the early 2000s.
- In school year 2013-2014, 452,000 students were located in overcrowded schools; class sizes in elementary and middle schools continued to rise.
- The use of credit recovery in the high schools peaked in 2010-2011, dropped dramatically in 2012-2013 and continued to decline in 2013-2014.

The independent budget office of the city of New York shall be authorized to provide analysis and issue public reports regarding financial and educational matters of the city district, to enhance official and public understanding of such matters...

New York State Education Law § 2590-u.

## Description of Data And Sources

## GENERAL NOTES ON DATA AND SOURCES

With very few exceptions, the data presented in this volume reflects IBO's analysis of individual student or staff data obtained from the Department of Education (DOE).

The volume is current through school year 2013-2014 for student and staff data. A number of tables which utilize our newly developed measure of poverty levels for schools (described more fully below) are for 2012-2013. We also present some data from the city's adopted budget for fiscal year 2016, which represents spending planned for the current school year, 2015-2016.

School level data was taken from the DOE's website to classify schools as either new or existing. Our definition of a school's age has been changed from that used in previous editions of this report. In the past, we defined any school that was opened during the Bloomberg Administration (2002-2013) as a new school. All other schools were designated as existing schools. With the change in administration and the passage of time, that distinction seems less relevant. In this report, we distinguish between schools that have been open for less than five years (newer schools) from those open five years or more (older schools). For tables in which we are reporting data for 2013-2014, schools that opened in 2009-2010 or later would be classified as being open up to five years.

The source data traditionally used to classify school poverty levels-student eligibility for free or reduced-price lunch-has become less reliable, necessitating a change in how we measure the poverty level of schools. In the past, we used data on students' eligibility for free or reduced-price lunch to designate schools as being in the top, middle, or bottom third of all schools in terms of percent eligible for meal subsidies. There are three main concerns about the use of a student's meal subsidy status as a measure of poverty. First, the self-reported form is an imperfect measure of household income, especially since many students do not return the form. Students that are deemed ineligible for subsidized meals due to a missing or incomplete form default to the full-price lunch status. However, these students tend to perform academically more like students who qualify for free lunch rather than students who qualify for full-price lunch based on a completed form. Therefore, the group of students categorized as ineligible for free or reduced-price lunch may in fact include many students who would be deemed eligible if proper documentation was available. Second, many schools are increasingly participating in federally funded programs to provide free meals to all students in a school-through the Universal School Meals program or a similar program for middle schools in New York City-regardless of an individual student's meal status. As these programs expand, schools have less of an incentive to collect the forms from each and every student and the number of nonresponses will increase. Third, the U.S. Census Bureau's determination of the poverty line itself is based on out-dated assumptions from 1963.

In this report, IBO is introducing a measure that is meant to reflect the income of a typical household in a particular geographic community. It is important to stress that this is not a measure of the income level of individual families, like the free or reduced-price eligibility measure, but rather a measure of income in the community in which students live.

Instead of using the poverty line calculated by the U.S. Census Bureau, IBO chose to use a poverty threshold calculated by the NYC Center for Economic Opportunity (CEO), an initiative under the Office of the Mayor. The CEO was launched by Mayor Michael Bloomberg in 2006. Its mission included an initiative to develop a more accurate way to measure poverty and count the poor in the city. Since August 2008, the CEO has published an annual report that discusses the methodology behind the CEO-calculated threshold for poverty and compares conditions in New York using the CEO threshold and the U.S. Census Bureau's official threshold. The annual report was officially mandated in the New York City Charter in December 2013. The CEO poverty threshold for a family of four consisting of two adults and two children was $\$ 31,039$ in 2012, compared with a threshold of $\$ 23,823$ for the same family under the Census Bureau's definition. While the CEO threshold was intended to be used in conjunction with the CEO income measure, IBO used available median household income data from the U.S. Census Bureau in the absence data necessary to replicate CEO's income measure at the school level.

For each school, IBO calculated the share of students who come from poor communities. Roughly a third of schools serve a student population where less than 10 percent come from poor communities. In another third of schools, from 10 percent to 40 percent of students come from poor communities. In the 7.5 percent of schools with the largest share of students from poor communities, between 80.0 percent and 98.8 percent of students are poor under IBO's definition.

The development of this school community poverty level relies on student address data provided to IBO by the DOE. Our methods are fully described in a separate technical report. We currently have the address data just for the 2012-2013 school year, so the tables that rely on this measure are only for that year. To date, DOE has been unable to provide us with a student address file for 2013-2014.

Student demographics are derived from individual student records maintained by the Department of Education and provided to IBO for each of the last 14 years. These records include basic biographical information; achievement test scores; attendance records; and information on students' entry to, exit from, and movement within the school system.

Students move in and out of the school system throughout the school year. The files provided to us by the DOE include information on all students who were "active" on a school's register at any point in a particular school year. For this reason, we are often reporting on a larger number of students than are reported on the school system's official count of enrollment. That figure, called the audited register, is drawn by the school system on October 31st of each year, and represents the number of students enrolled on that day. The numbers of students reported in our tables will also vary depending upon missing data for a particular indicator. If, for example, we are reporting data on the ethnicity of students, we drop any students whose ethnicity was not identified in our data.

## NOTES ON SPECIFIC DATA SOURCES

## Who Are New York City's Public School Students?

Tables 2.1 through 2.5 and 2.7 are derived from individual student records and include students in all grades in Districts 1-32, District 75 (Self-Contained Special Education), and District 79 (Alternative Programs).

Table 2.6 is derived from the DOE's BESIS (Bilingual Education Student Information System) which tracks the placement of students in programs specifically designed for English Language Learners. The school system provides a range of services to students who are classified as English Language Learners (ELL). These are students who speak a language other than English at home and who have not yet attained a certain level of English proficiency. Students in English as a Second Language programs (ESL) attend their subject classes in English while also receiving special instruction meant to bring them to English language proficiency. Transitional Bilingual Programs provide instruction in English and students' native languages. As students' English proficiency increases, the amount of native language instruction decreases.

Dual language programs provide instruction in two languages. The ideal model is that in which 50 percent of the students are English proficient and 50 percent are ELLs who speak a common home language. Students become proficient in reading, writing, and speaking in English and the target language (i.e. Spanish, English, Haitian-Creole). Specific programs for students with special needs are meant to fulfill the recommendations of those students' Individualized Education Plans (IEPs). These programs range from classrooms serving a mix of special education and general education youngsters to classrooms designed to serve a very small number of youngsters with specific needs.

Specific programs for students with special needs (Table 2.7) are meant to fulfill the recommendations of those students IEPs. These programs range from classrooms serving a mix of special education and general education youngsters to classrooms designed to serve a very small number of youngsters with specific needs.

## Note: No Detailed Data on Students With Special

Needs. Last year's indicators report presented data on the classification and program placement of students with special needs. The DOE data system used to produce those tables has been replaced by SESIS, the Special Education Student Information System. Ongoing problems with SESIS have prevented the DOE from providing IBO, or other monitors, with information on the 193,000 student Special Education program. Thus, we are unable to report on the classification and program placement of special needs students in this report.

Tables 2.8 and 2.9 are derived from individual student records maintained by the DOE and include all students who were active in a DOE school at any point in the 2012-2013 school year. Students in all grades in Districts 1-32, District 75 (Self-Contained Special Education), and District 79 (Alternative Programs) are included. Eligibility for meal subsidy (Table 2.8) has generally been used to measure the poverty level of schools. Under federal regulations, students are eligible for free or reduced-price lunch if their families' reported income is less than 185 percent of the poverty level

Under DOE regulations, a student must be registered in kindergarten by December 31st of the year in which he or she turns 5 years old. We compute a student's age as their age in December of each year and count as overage any student who is older than the age at which
they may attend a grade. Thus, we count a kindergarten student who is 6 years old in December as being overage. DOE considers a student to be overage if the student is two years older than standard for a grade.

Table 2.10 and Figure 2.1 are derived from the DOE's annual audited student register, which counts only students enrolled on October 31 of each year. These data are available on the DOE website.

Table 2.11 is designed to answer the questions about the dynamic nature of the New York City school population by tracking the mobility of a group of students over a long period of time. It is based upon records for individual students drawn from the DOE's audited register file, which provides student status as of October 31 of each year and includes students enrolled in either DOE schools or public charter schools in the city. Table 2.11 includes students born in 1996, and enrolled in the DOE in 2003-2004. Tracking these students over 11 years, the table shows the extent to which students-including students in charter schoolsleave the public school system over time.

Table 2.12 reports the single year mobility of students between schools. It takes all students on register in a DOE public school (not including charters) in 20132014 and looks back to the 2012-2013 school year to report how many changed schools and how many had not been enrolled in either a DOE public school or public charter school in the previous year.

Table 2.13 is derived from the DOE "Students in Temporary Housing File." The data has two sources. The Department of Homeless Services informs the DOE of any students living in shelters. Other housing situations reported on this table are based upon family self-reporting on a DOE administered survey. The DOE data, and this table, include students who are in any of these housing situations, including shelters, at any point in the school year, regardless of how long they remained in temporary quarters.

## WHAT RESOURCES ARE MADE AVAILABLE TO OUR PUBLIC SCHOOLS?

Tables 3.1, 3.2, and 3.3 are derived from two sources the Mayor's Office of Management and Budget and the city's Financial Management System. The Mayor's Office of Management and Budget (OMB) provides information on the funding of the school system and on the broad
allocations made to the system through the annual budget as proposed by the Mayor, and as amended and adopted by the City Council. Much of this data is available to the public in summarized form in periodic budget reports on OMB's website. We have access to the same information in greater detail and in real time through the city's Financial Management System.

More than half the DOE's budget is retained in central offices and not placed on individual school budgets. Table 3.3A summarizes the use of that money as of June 2015. The table categorizes spending into a four broad categories-direct student services, employee related costs, selected policy initiatives, and system management and overhead. This categorization is IBO's based on the descriptors provided in DOE budget data.

Tables 3.4 and 3.5 are based on the allocation of budgetary resources by individual school principals. The source of this data is an internal report provided by the DOE to IBO on a monthly basis called the School Leadership Team View. It provides a detailed accounting of the source and use of every dollar controlled by the principal of each public school in the city. We used the report from June 2013 to produce the summaries presented here.

Principal and teacher data in tables 3.6 through 3.16 are derived from individual personnel records maintained by the DOE and provided to IBO for each of the last 11 years. In addition to demographic and assignment data, these files indicate the use of alternative pathways to employment (Teach for America, Teaching Fellows, the Leadership Academy, etc.) by individual staff.

Building and class size data in tables 3.17 through 3.25 has been taken from DOE reports that are available to the general public on the DOE's website, particularly the "Blue Book" and the Class Size Report.

Information on the availability and distribution of science rooms, tables 3.26 and 3.27 , is based on IBO's analysis of data from the School Construction Authority's Principals Annual Space Survey (previously known as the Annual School Facilities Survey).

## WHAT DO SOME INDICATORS OF <br> SCHOOL PERFORMANCE SHOW?

Because we report information on all students for whom we have data, our achievement numbers also
differ from the official numbers maintained by the New York State Education Department. These differences are very small, often amounting to no more than a tenth of a percentage point. Official achievement statistics are readily available on both the DOE and New York State Education Department websites.

Student attendance data, tables 4.1 and 4.2 , were derived from the DOE student biographical file.

All students in grades 3 through 8 take the annual New York State examinations in English Language Arts (ELA) and mathematics. Data from these tests are displayed in tables 4.3 through 4.10. The tests produce two types of scores for each student. The scale score is a three digit score that indicates students' absolute level of performance on the test. The state is currently using tests that are designed so that the scale scores only have meaning within a particular grade. Thus, they can be used to see how this year's third graders performed compared with last year's third graders, but they cannot be used to compare how a student in this year's fourth grade performed compared with his/her own performance in third grade last year. The second type of score-the performance level-assigns students to one of four groups based upon their scale score. The labels assigned to the four categories were revised in 2010, and they are now as follows: Level 1-Below Standard; Level 2-Meets Basic Standard; Level 3-Meets Proficiency Standard; and Level 4-Exceeds Proficiency Standard.

The State Education Department introduced new ELA and math tests in 2012-2013. Results from 2012-2013 through 2014-2015 are not comparable to those of previous years.

High school students in New York City (and state) participate in the Regents testing program. These results are presented in tables 4.11 through 4.15. Regents exams are subject based. Beginning in the 2011-2012 school year, and except for students in a few schools with so-called portfolio programs, no public school student may earn a standard high school diploma in New York State without first passing five Regents exams-Comprehensive English, any of the math exams, Global History and Geography, United States History and Government, and any of the sciences. Students who pass an additional three Regents exams (in another math, another science, and a foreign language) are awarded an Advanced Regents Diploma.

Students sit for these exams at various points in their high school career, and there is no standard pattern to their test taking. Some high schools offer the math exam at the end of grade 9; others delay until the end of grade 10. Generally, the Comprehensive English exam is taken after at least three years of high school. Further, students may retake exams they have attempted and failed until they attain a passing score. Thus, any single administration of a Regents exam includes both first-time test takers and those students who have previously failed and who are taking the test for the second or third time. Therefore, care must be taken in interpreting the absolute passing rates for an individual administration of an exam.

In this report, we are less concerned with the absolute passing rates than with the relative passing rates of different groups of students. In making those comparisons, we have developed the following indicator: Regents pass rates for either English or math represent the proportion of students who took each test in 2013-2014 that achieved a passing score. If a student took an exam multiple times in a single school year, or took more than one math test in that year, only the highest score was counted.

A passing score for all Regents exams is a 65. In 2010, the State Education Department commissioned a team of researchers led by testing expert Daniel Koretz to define college readiness. Students with Regents
scores high enough to strongly predict a grade of "C" or better in a college-level course are considered college ready. The researchers estimated that students who received Regents scores of at least 75 for English and 80 for math were college ready. For both English and math, we report the percentage of students who failed, the percentage who passed, and the percentage who scored at or above the college-ready level. (The DOE has a different measure of college readiness, which includes a number of factors; here we are referring only to the Regents exam score).
"Credit recovery" (Table 4.16) permits students to make up credit after they have failed a course. Based on regulations promulgated by the State Commissioner of Education in 2010, students can make up credit for a failed class by repeating the course during the school year or during summer school, or by receiving intensive instruction in the student's identified areas of deficiency in the course. According to the regulation, a school-based panel must review and approve a student's participation in credit recovery, and all makeup courses or programs must be overseen by a teacher certified in the subject area for which the student is making up credit.

Since 2010-2011, the DOE has required schools to specifically identify all credits earned through the use of credit recovery in the student record-keeping system.

| Teach in Newer School | 34.3\% | 34.6\% | 21.5\% | 19.4\% | 31.0\% | 19.5\% |
| Teach in Older School | 65.7\% | 65.4\% | 78.5\% | 80.6\% | 69.0\% | 80.5\% |

NOTES: For 2011-2012, 2012-2013, and 2013-2014, TeachNYC Select Recruits also include those teachers recommended by the Office of Teacher Recruitment. Newer schools are those that have been open for less than five years as of the year in question. For example, a school is considered to be new in 2008-2009 if it opened in 2004-2005 or later.

|  | Fail | Total Passing | College Ready | Total Tested |  | Fail | Total Passing | College Ready | Total Tested |
| Special Education | 55.0\% | 45.0\% | 16.8\% | 13,433 | Special Education | 65.8\% | 34.2\% | 5.2\% | 21,887 |
| General Education | 18.6\% | 81.4\% | 52.9\% | 79,633 | General Education | 31.6\% | 68.4\% | 26.1\% | 144,739 |
| TOTAL | 23.9\% | 76.2\% | 47.7\% | 93,066 | TOTAL | 36.1\% | 63.9\% | 23.3\% | 166,626 |

NOTE: The percent of students who achieved a college ready Regents score are shown as a subset of all students who passed the exam. Thus, the percent of students in the pass column includes both students who achieved a just passing score and those who achieved a college-ready score. New York City Independent Budget Office

## Table 4.15 <br> English and Regents Performance, by Race/Ethnicity and Gender, 2013-2014

| Race/Ethnicity | English Performance |  |  | Total Tested | Race/Ethnicity | Math Performance |  |  | Total Tested |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Fail | Pass | College Ready |  |  | Fail | Pass | College Ready |  |
| American Indian or Alaskan Native | 24.6\% | 75.4\% | 47.7\% | 581 | American Indian or Alaskan Native | 37.3\% | 62.7\% | 20.1\% | 1,082 |
| Males | 26.8\% | 73.2\% | 44.7\% | 302 | Males | 37.8\% | 62.2\% | 19.8\% | 556 |
| Females | 22.2\% | 77.8\% | 50.9\% | 279 | Females | 36.9\% | 63.1\% | 20.3\% | 526 |
| Asian or Pacific Islander | 15.2\% | 84.8\% | 63.0\% | 16,357 | Asian or Pacific Islander | 17.4\% | 82.6\% | 50.7\% | 30,539 |
| Males | 18.3\% | 81.7\% | 57.7\% | 8,632 | Males | 18.4\% | 81.7\% | 48.5\% | 15,681 |
| Females | 11.8\% | 88.2\% | 69.0\% | 7,725 | Females | 16.4\% | 83.6\% | 52.9\% | 14,858 |
| Hispanic | 28.5\% | 71.6\% | 40.4\% | 36,436 | Hispanic | 42.4\% | 57.6\% | 14.4\% | 63,251 |
| Males | 33.1\% | 66.9\% | 34.9\% | 18,598 | Males | 44.0\% | 56.1\% | 13.7\% | 31,402 |
| Females | 23.6\% | 76.4\% | 46.0\% | 17,838 | Females | 40.9\% | 59.1\% | 15.1\% | 31,849 |
| Black-Not of Hispanic Origin | 27.4\% | 72.6\% | 40.5\% | 28,093 | Black-Not of Hispanic Origin | 45.9\% | 54.1\% | 11.4\% | 47,614 |
| Males | 33.4\% | 66.6\% | 33.5\% | 14,160 | Males | 49.2\% | 50.8\% | 9.7\% | 23,090 |
| Females | 21.0\% | 78.7\% | 47.6\% | 13,933 | Females | 42.8\% | 57.2\% | 13.0\% | 24,524 |
| White-Not of Hispanic Origin | 13.2\% | 86.8\% | 66.3\% | 11,144 | White-Not of Hispanic Origin | 24.3\% | 75.7\% | 35.4\% | 22,481 |
| Males | 16.9\% | 83.1\% | 59.6\% | 5,761 | Males | 25.4\% | 74.6\% | 33.9\% | 11,682 |
| Females | 9.2\% | 90.8\% | 73.4\% | 5,383 | Females | 23.2\% | 76.8\% | 36.9\% | 10,799 |
| Multiracial/Mixed Ethnicity | 7.9\% | 92.2\% | 76.4\% | 191 | Multiracial/Mixed Ethnicity | 19.3\% | 80.7\% | 44.7\% | 445 |
| Males | 9.4\% | 90.6\% | 65.9\% | 85 | Males | 21.3\% | 78.7\% | 45.0\% | 211 |
| Females | 6.6\% | 93.4\% | 84.9\% | 106 | Females | 17.5\% | 82.5\% | 44.4\% | 234 |
| TOTAL | 23.9\% | 76.1\% | 47.6\% | 92,802 | TOTAL | 36.2\% | 63.8\% | 23.2\% | 165,412 |
| Males | 28.4\% | 71.6\% | 41.8\% | 47,646 | Males | 37.7\% | 62.3\% | 22.4\% | 83,212 |
| Females | 19.1\% | 81.0\% | 53.9\% | 45,420 | Females | 34.5\% | 65.5\% | 24.3\% | 83,414 |

NOTE: The percent of students who achieved a college ready Regents score are shown as a subset of all students who passed the exam. Thus, the percent of students in the pass column includes both students who achieved a just passing score and those who achieved a college-ready score. New York City Independent Budget Office

Table 4.16
Citywide Trends in Use of Credit Recovery in High Schools, 2008-2009 Through 2013-2014

|  | $\mathbf{2 0 0 8 - 2 0 0 9}$ | $\mathbf{2 0 0 9 - 2 0 1 0}$ | $\mathbf{2 0 1 0 - 2 0 1 1}$ | $\mathbf{2 0 1 1 - 2 0 1 2}$ | $\mathbf{2 0 1 2 - 2 0 1 3}$ | $\mathbf{2 0 1 3 - 2 0 1 4}$ |
| :--- | :---: | ---: | ---: | ---: | ---: | ---: |
| Total Number of Credit <br> Recovery Attempts | 28,974 | 45,608 | 134,457 | 98,652 | 23,765 | 17,072 |
| Percent of Credit Attempts That Were <br> Designated Credit Recovery | $0.6 \%$ | $0.9 \%$ | $2.6 \%$ | $1.9 \%$ | $0.5 \%$ | $0.3 \%$ |
| Total Number of Students in HS <br> Grades with at Least One Credit <br> Recovery Attempt | 17,731 | 29,480 | 56,986 | 45,672 | 15,194 | 111,337 |
| Percent of Students in HS Grades With <br> At Least One Credit Recovery Attempt | $5.6 \%$ | $9.3 \%$ | $18.0 \%$ | $14.5 \%$ | $4.9 \%$ | $3.7 \%$ |

NOTE: Data includes all courses attempted by students in high school grades. These counts do not distinguish successful from unsuccessful attempts at credit recovery.
